DETAILED ACTION

1. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Merritt (5,318,611) in view of Chang et al (EP 887670).

Merritt shows a process for making optical fiber in which a core cylinder is coated with soot, dehydrated, sintered, drawn and then subjected to further soot deposition. Chang et al teaches that it is important to dehydrate to obtain a core/cladding below 1 ppb to achieve a superior optical fiber. Thus it would have been obvious to dehydrate to obtain an OH level below 1 ppb in Merritt.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant should take note.

Berkley et al (6,477,305) is cited to show the importance of achieving OH level below 1 ppb, column 1 and 6. The importance of this is also discussed in the Moriyama et al article cited by applicant.

Kuhabara et al (6,306,500) teaches the important relationship of the pore size of the soot cladding layer on the glass core to the OH content.
